

Seed LA

Los Angeles Regional
Native Seed Network

Collect

Seed LA partners collect seeds from locally adapted and regionally suitable native plants which are processed and stored within a decentralized seed banking network.

Distribute

The seeds will be distributed to serve regional conservation projects that provide urban habitat connectivity, support watershed health, increase native ecosystems, and contribute to a healthy environment for residents.

Plant

Planting locally sourced seed is the imperative first step to establish resilient and sustainable public landscapes. The plants and seeds will grow in a regionally suitable location in Greater Los Angeles.

MISSION

Our mission is to increase the availability of locally adapted seeds to conserve and enhance ecological diversity of the greater Los Angeles area

GOALS

Our goal is to collect, process, store and provide locally-sourced native seed to ensure sustainable, well-adapted and habitat-supporting landscapes.

VISION

Seed LA provides our partners with the highest quality native seed and access to our expertise and institutional resources. Our work helps the public increasingly value the biodiversity of Los Angeles and are a model for urban conservation and regional collaboration

Seed LA is a collaborative initiative including the following partners:
